

It's Time to Check Your Number

Here is your friendly reminder to check your HbA1c!

What is my HbA1c?

HbA1C is a measurement of your average blood glucose levels over three months. The CDC has determined that a normal A1C is below 5.7%. With a result up to 6.4%, you are considered to be living with pre-diabetes. If your HbA1c is 6.5% or higher, you are considered to be living with diabetes.

It's never been easier to get your number.

At ProSciento, we can test your HbA1c at no cost as part of clinical research study pre-screening.
